

PRODUCT UPDATE

Cycle Gard® CI – CIN101

Effective immediately, all Flomatic **Cycle Gard® CI – CIN101** threaded models will be constructed with the new Cycle Gard® CI² main valve body. CI part numbers will remain the same. The original CI threaded body design along with the 3" and 4" flanged body styles have been discontinued and will no longer be available. For flanged models please see the **Cycle Gard® II** model.

The new CI² body design is more flow efficient and the flat diaphragm design allows for a longer more dependable service life.

Replacement diaphragms and springs will continue to be available for existing CI body styles already in service for serial #s 17036 and below.

**Thank You,
The FLOMATIC Team**
