March 17, 2020 Glens Falls, NY – Flomatic is proud to introduce the new Stainless Steel direct acting constant pressure pump control valve with tapings, Model Cycle Gard® IV CB152SST. This flow efficient globe style, all stainless steel body is equipped with a 1” NPT size female inlet threads and with a 1” NPT union end female outlet connection. The valves standard pressure range is 15- 75 PSI with an optional 15-150 PSI range. The CYCLE GARD® IV CB152SST valve body maximum pressure rating is 400 PSI. All of the valves internal parts are corrosion resistant with a stainless steel spring and fasteners for long service life.

The Model CYCLE GARD® IV CB152SST unique constant pressure valve is equipped with additional NPT tapped bosses for pressure gage, water tank and or a pump pressure switch. It maintains a preset operating pressure and reduces rapid pump cycling and is proven protection for wells and booster pumps. Flomatic’s CYCLE GARD® IV valve regulate high upstream (inlet pressure) to a lower regulated downstream (outlet pressure) constant pressure within a range regardless of water flow. This is accomplished by an adjustable spring loaded balancing valve factory set to automatically regulate the downstream pressure to 50 PSI. The regulating pressure is field adjustable in a wide range.

For more than 85 years, Flomatic has been changing the industry valve and leading the market. Manufacturing a full line of check valves for the water and wastewater market, ranging from 1” – 36”. Flomatic’s products have been installed in a wide variety of applications with excellent results. Flomatic is an ISO 9001 and 14001 certified company with comprehensive manufacturing processes and AIS compliant products.
