**May 26, 2020, Glens Falls, NY** – Flomatic® is proud to announce that all of its VFD Series Check Valves are NSF/ANSI 61 certified for drinking water systems. In addition to NSF/ANSI 372, the low-lead standard has a weighted average of 0.25% lead content by dry weight.

**NSF/ANSI 61 – Drinking Water Standards** - Are a set of national standards which establish stringent requirements for equipment that comes in contact with potable water. The test uses different water pH levels to a more challenging chemical certification.

Flomatic® has a wide range of patented VFD check valves configurations in Unleaded Bronze, Stainless Steel, and Ductile Iron, specially designed for use with variable-frequency drive (VFD) controlled submersible pumps. A standard check valve will “chatter” and be noisy when a VFD goes to low flow conditions, causing noise, premature wear, and eventual failure. These unique valves also work efficiently in standard pumping or other conventional pumps. Flomatic’s unique VFD valves are designed to minimize flow losses and hydraulic shocks in the pumping system.

For more than 86 years, Flomatic has been a high-quality valve manufacturer for the water and wastewater markets. Manufacturing a full line of check valves for the water and wastewater market, ranging from 1” – 36”, Flomatic’s products have been installed in a wide variety of applications with excellent results. Flomatic is an ISO 9001 and 14001 certified company with comprehensive manufacturing processes and AIS compliant products.
