GLENS FALLS, NY (June 2022) – Flomatic® Valves is proud to introduce the patented Model 48 Drain Back Valve® available in a 1-inch size for submersible pump water well installations. Flomatic’s Model 48 Drain Back Valve® is constructed with corrosion resistant stainless steel body and plunger, and features NSF 372 low lead approval.

The NSF 372 certified Model 48 Drain Back Valve® is designed to reduce pulling weight by 20% to 50% and eliminate water splashing at the wellhead. The valve is built to automatically drain the riser pipe and is activated when a Drop Weight® (4801DW1), is lowered into the well riser pipe. The spring-loaded plunger is activated by the weight – opening the valve – which returns to a closed position when the drop weight is removed. The Model 48 Drain Back Valve® automatically resets after each use.

For a more detailed look at the benefits and specifications of the 1-inch Model 48 Drain Back Valve®, visit our website [HERE](#) or view our 2022 product catalog [HERE](#). To learn more about our innovative valve product solutions, visit our website www.flomatic.com or contact Laura Jensen, [Marketing Communications Specialist](#), at (518) 681-3972.

For nearly 90 years, Flomatic Valves has been associated with some of the largest water and wastewater projects in the world as a global leader in the water and wastewater industry. Designing and developing a wide variety of valve products – from high quality check valves to automatic control valves ranging from 1 inch through 36 inch – we are an ISO 9001 and 14001 certified manufacturer offering comprehensive manufacturing solutions and a wide variety of AIS-compliant valves.
