Glens Falls, NY – Flomatic Corporation introduces a new all 316 Stainless Steel submersible pump check valve for use with variable-frequency drive (VFD) controlled pumps. The poppet assembly is designed for minimum flow loss and giving years of trouble free service under variable flow. Flomatic's unique VFD valve turns the popper upside down and moves the popper away from the seat bore after opening under flow. An exclusive precision guided 316 poppet system adjusts noiselessly from high to low flow rates. A special radius seat gives the valve a self-cleaning "one point swiping action" by the radius edged custom molded rubber seat disc. All internal parts are made from corrosion resistant materials.

For more detailed information on Flomatic's new **Model 80S6VFD** check valve or to obtain a copy of the new 2013 condensed valve catalog, visit www.flomatic.com, email them at flomatic@flomatic.com, call Flomatic Corporation at 1-800-833-2040 or fax them at 1-800-314-3155.
