

Danfoss Flomatic

UNLEADED BRONZE VALVES

2/3/2010 Rev: 3

Glens Falls, NY – Danfoss Flomatic Corporation is compliant with California and Vermont lead-free legislation that went into effect January 1 of this year for all valve products. For many years, Flomatic has been committed to providing products that exceed the requirements for lead content for decades and has excellent experience in manufacturing unleaded valve products. There is no need for new part numbers or special order unleaded valves that are compliant because Flomatic is compliant and has been for years.

Danfoss Flomatic Valves is a company committed to preserving and improving the environment while producing valve products that meet the most stringent safety and health standards. Danfoss Flomatic introduced the industry's first unleaded bronze **ENVIRO-CHECK®** in 1996, which have been recognized as an acceptable material for California Prop 65.

This new bill has revised the term lead free, "to refer not to the lead content of pipes and pipe fittings, plumbing fittings, and fixtures but to a weighted average lead content of the wetted surface area of the pipes, fittings, and fixtures of not more than 0.25%." Nick Farrara, VP of Sales, states, "We have taken a leadership role which will ensure continuous improvement in processes that impact on the environment. This is consistent with our environmental policy and our ISO 9001 and 14001 environmental registrations. I'm convinced that in the future, unleaded materials with less than 0.25% lead will be a requirement in all markets." Danfoss Flomatic has the solution for these requirements with "Enviro" bronze products.
