Glens Falls, NY- Danfoss Flomatic Corporation introduces a new four-color bulletin covering their new Cycle Gard® Constant Pressure Pump Control Valves family. The Cycle Gard® Constant Pressure Pump Control Valves maintain a constant pressure, eliminates the pump from cycling. These valves feature a hydraulically operated valve requiring no electricity and helps eliminates the effect of water hammer, extends pump motor life, and allows for a reduced tank size. These valves automatically regulate downstream pressure and provide a constant pressure until the demand in the system is no longer required. Depending on the valve model, an integral or external low flow by-pass allows the system pressure to slowly rise under low demand and fill the tank or reservoir until the pressure switch setting is reached shutting the pump off. This new bulletin explains the Cycle Gard® Constant Pressure Pump Control Valve's features and benefits, dimensions and also has suggested specifications.

For more information, please call Danfoss Flomatic Corporation at 1-800-833-2040. You will also find detailed information on these products and all of their products at www.flomatic.com or please feel free to email them at flomatic@flomatic.com
